U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04) Applicant's amendments and remarks filed 12/27/04 have been received and reviewed. Claims 3, 4, 6 and 9-34 are pending in this application.

The rejection of claims 3,4, 6 and 9-34 under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement and the rejection over 35 U.S.C. 101, double patenting, are withdrawn.

Claim Rejections - 35 USC § 112

Claims 3, 4, 6 and 9-34 are again rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the geldanamycin dimer, wherein the linker is (CH₂)₄. ₁₂ and bonded to the 17-carbon of each geldanamycin, to treat breast cancer, does not reasonably provide enablement for "a chemical compound comprising first and second hsp-binding moieties which bind to the pocket of hsp90 with which ansamycin antibiotics bind, said binding moieties being connected to one another by a linker, wherein the first and second hsp-binding moieties are each an ansamycin antibiotic and retain the ability in the chemical compound to bind to the pocket of hsp90" for treating any and all cancers.

The specification does not enable any skilled chemist to make and use the invention commensurate in scope with the instant claims. The basis of this rejection is the same as given in the previous office action and is incorporated herein fully by reference.

Determining the compound claimed would require synthesis of millions of compounds and testing each to determine whether the compound falls within the scope of claim 1.

The specification does not provide enablement for the treatment of cancer generally. No compound has ever been found that can treat cancers generally even though massive efforts have been directed towards this end. Since this assertion is contrary to what is known in oncology,

Application/Control Number: 09/937,192 Page 3

Art Unit: 1624

proof must be provided that this revolutionary assertion has merits. Nearly all anticancer drugs are effective against only a limited group of related cancers. Therefore, a compound effective against cancer generally would be a revolutionary exception. Applicant is asserting that he succeeded where others have failed. Where extensive efforts have all failed, it is reasonable for the Patent and Trademark Office to require proof that the claimed invention actually works for this specific utility. It is well established that a utility rejection is proper when scope of enablement is not reasonably correlated to the scope of the claims. (In re Vaeck 20 USPQ2d 1439, 1444, In re Ferens 163 USPQ 609).

In re Buting 163 USPQ 689 establishes that even clinical tests showing that a compound found to be useful in the treatment of two types of cancers was not sufficient for a much broader range.

New Grounds of Rejections

Claim Rejections - 35 USC § 112

Claims 3, 4, 6 and 9-34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

i) The metes and bounds of the "ansamycin" is unknown. Applicants' argument in the Appeal brief has been fully considered but is not persuasive. Therein, Applicants state, "The ansamycins constitute a class of antibiotics characterized by an aliphatic bridge linking two nonadjacent positions of an aromatic nucleus." This definition includes compounds, such as,

Application/Control Number: 09/937,192

Art Unit: 1624

degrees of unsaturation, presence of any other heteroatoms, etc. affect the scope? The point is, there is no definition of an ansamycin antibiotic.

- ii) The nature of the linker is unknown. One skilled in the art cannot say which "linker" is intended. Could another ansamycin be a linker? How about a bond, a ring structure, a peptide, a sugar, an antibody, a cyclic peptide, etc.? In addition, the claim language such as "length of 4 to 7 carbon atoms" is unclear. Are only alkylenes intended or are Applicants relying on the length of carbon atoms. Appropriate correction is required. The linker should have distinguishing identifying characteristics defined to determine the scope.
- iii) The scope of the compounds claimed is undeterminable. The term "bind" in the claims is indefinite. There is no way of knowing whether a given compound would bind. Binding is a process which cannot be observed, merely inferred, which is unreliable. There is no test to determine whether binding is present or not. Furthermore, binding alone is not sufficient to determine the scope of the claims, but binding to the pocket of hsp90 with which ansamycin antibiotics bind is required. Now, the metes and bounds of "ansamycin antibiotic" are not known and the nature of the linker is not known. In addition, hsp90 simply refers to heat-shock proteins with an average molecular weight of 90Kd. This is a family of proteins which consists of Hsp90 alpha and beta, Grp94 and Trap-1. These exist in various mutant forms, and even in these 4, the pockets are not exactly the same.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 3, 4, 6 and 9-34 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 2, 6, 7, 12, 13 and 15-40 of copending Application No. 09/960,665. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims are fully embraced by the claims of 09/960,655.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
